
Feedback NAX

I was always keen to work with NAX. NAX manufactures for my company the production jigs and prototype parts for our R&D dpt.

If one collaborates with NAX it is difficult to work with another supplier. Their reaction time in RFQs is 24 hours.

NAX is our best supplier in terms of OTD and quality.

The quality of their work is unique.

The packaging is every time very carefully done and we had never problems with deliveries.

You can see their passion on their work.

The transparency of their way of working gives confidence to all customers. Even if there is a weakness in our specifications, NAX will always contribute to the improvement of our drawings without any issue.

They see directly if something is not possible for machining in the drawings and they give alternative solutions if needed.

They are reachable every time I need to contact them.

We also ask for designing solutions and they are always accurate, even if we provide just a draft.

Their work is certainly the right value for money.
